

1    **ABSTRACT OF THE DISCLOSURE**

2           The invention relates to a pharmaceutical composition for the treatment  
3   of skin neoplasm, which comprises a therapeutically effective amount of arsenic  
4   trioxide and a pharmaceutically acceptable carrier. Furthermore, the invention  
5   also relates to a method of treating skin neoplasm in a human by administering to  
6   a human in need thereof a therapeutically effective amount of a pharmaceutical  
7   composition comprising arsenic trioxide.
